

First Screen. Current Date is colored red.

When you select a date, color of today becomes back to black (I don't think I need to know today, so I just made it black again). Selected date will be highlighted green, and the date will be displayed on the top of the calendar.

When you click add button, you can select the time of the schedule, type of schedule, and description. Since this app is supposed to be simple, I did not add many things here. Remember, this must be a simple to-do list.

This is a sample. If you type nothing on the description, the calendar will show "Empty Schedule" instead of blank.

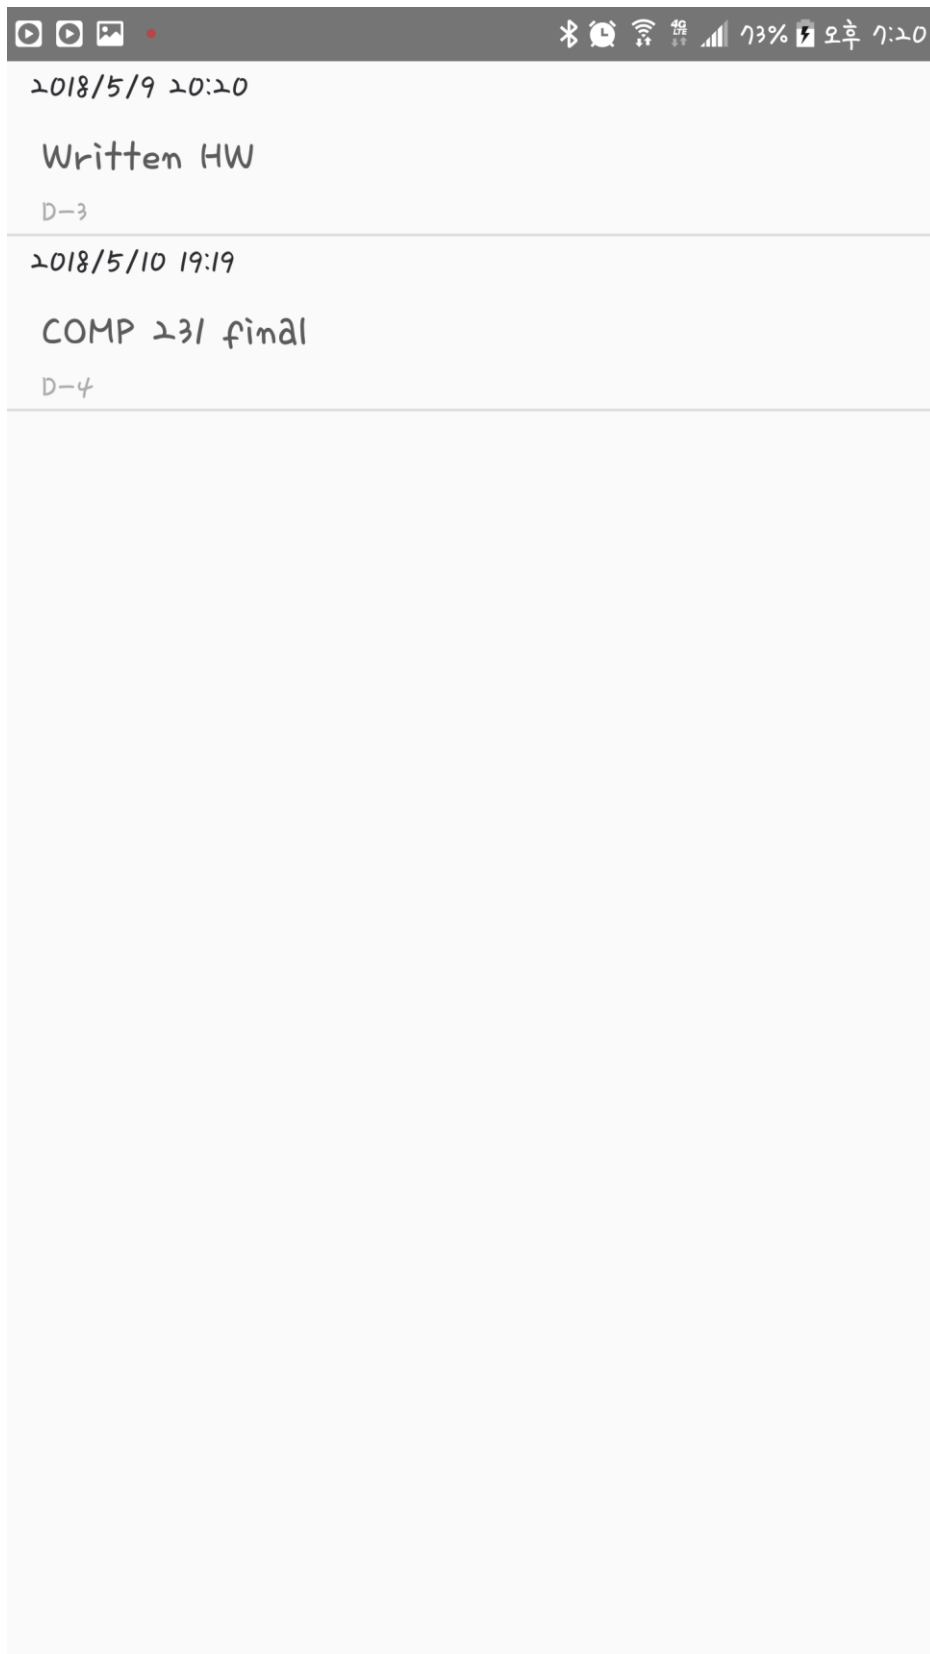

The sample schedule is added. Since it is an assignment, the color of the date is GREEN. Red dot on the top notifies you that you have something to do on that date.

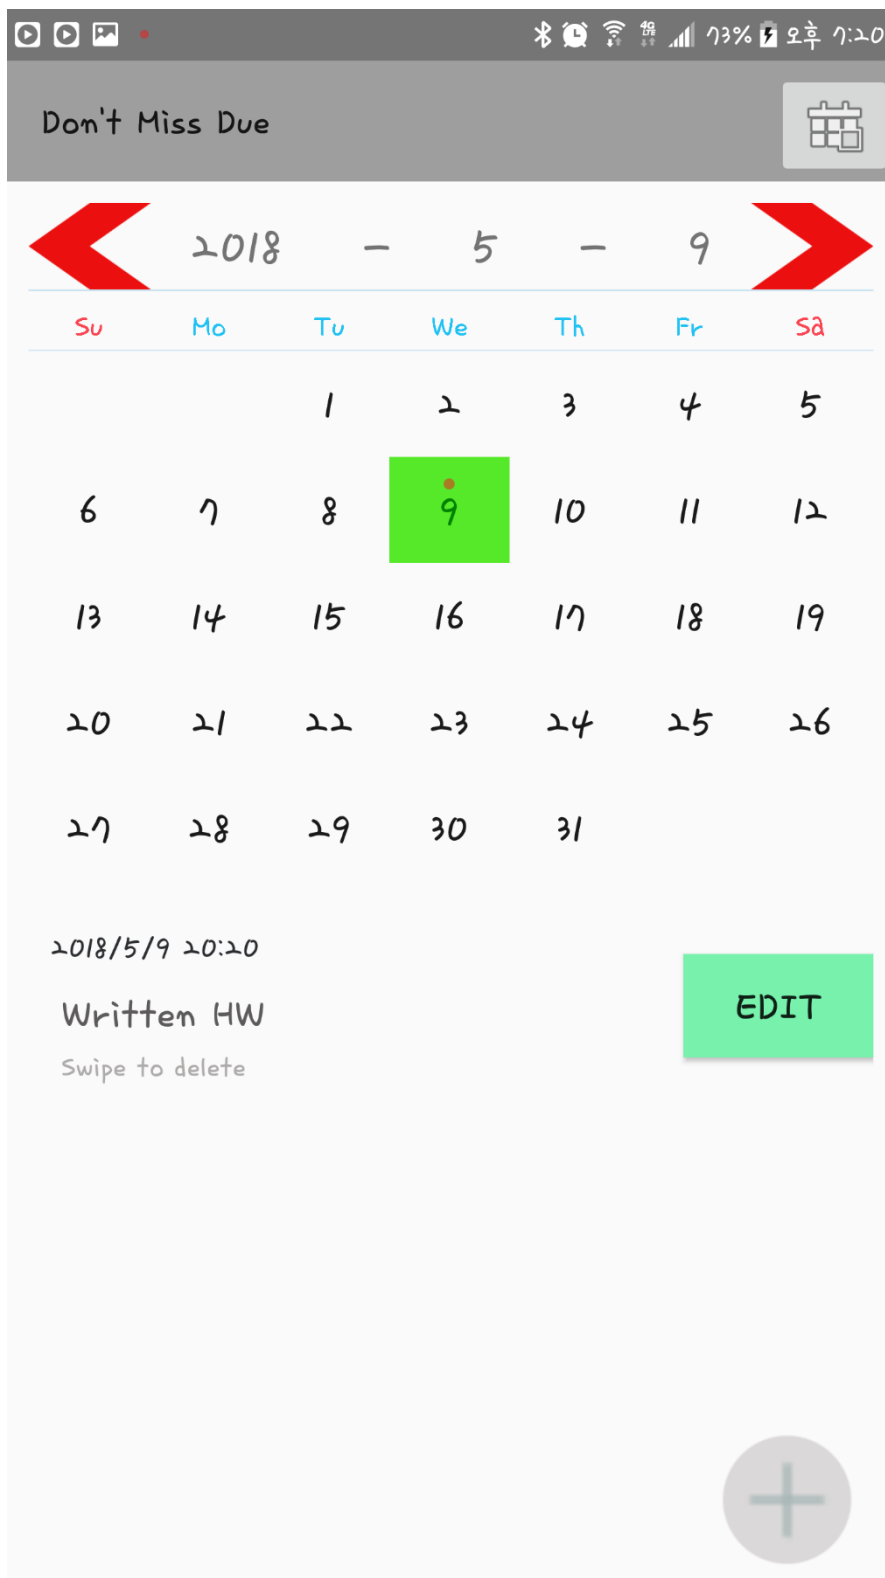

Another sample is added. I set this as a TEST one, so the color of the date is BLUE. If it is "OTHERS" type, then it won't change the color of the date.

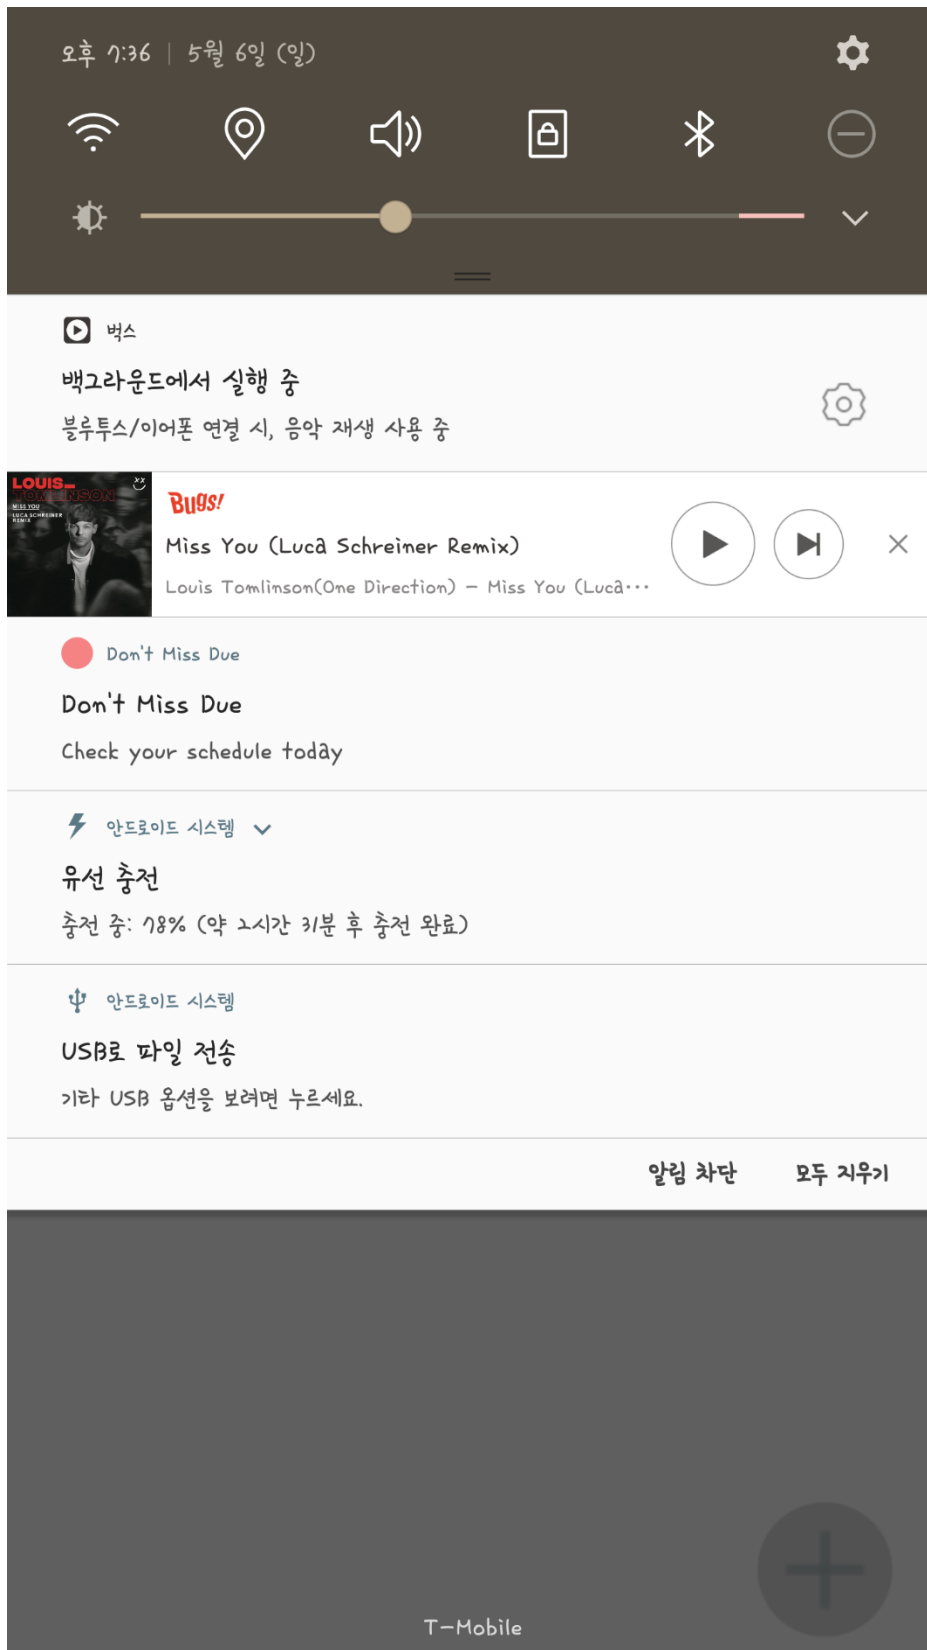

If you swipe it to the left, it pops up "DELETE" button, which will delete the schedule.

If you click the button on the top right corner to see all the schedules, it shows all the schedules in the recent schedule order with countdown (D-3). If the schedule is in the past (let's say the schedule was on 5th and today is 7th), it won't pop up in this activity.

Schedule on 10th is deleted, and it is back to black with no red dot on the top. If you swipe the schedule to the right, it pops up edit button, and you can go to edit view (looks same as the adding, but has a data of the schedule). However, since the time constraint, I couldn't finish the edit activity.

You get push notification every morning at 8. For the grading purpose, I set the repetition every minute, so you get this notification every minute. It simply opens the app.

Optional Features:

Push notification with alarm (repetition). You can change the repetition in MainActivity.class.

Fling function to activate delete & edit. Swipe the schedule left and right.

Data storage for all the schedule (also used for countdown)

Cool CalendarView with change of color when the day is selected / has a different type of schedule.
